

# APPLICATIONS

## House of Worship Sound Reinforcement System

### MXA150

This application shows a MXA150 being used in a house of worship sound reinforcement system. Channels #1~5 are set for input from the various microphones. Channel #6 is set for input from the tape deck (playback), which is also connected to Pre Out of the MXA150 (recording). If additional inputs are required, an auxiliary mixer (such as a Biamp 601) may be connected to EQ In on the MXA150. Two 8 ohm speaker cabinets are connected (in parallel) to the MXA150 4 ohm (direct) output.
