

beyerdynamic

New professional headsets from beyerdynamic.

Beyerdynamic presents two new headsets in the form of the DT 790 (with dynamic boom microphone) and the DT 797 (with condenser boom microphone). Designed for applications where high ambient noise isolation is required, these new headsets are perfect for broadcast or recording engineers out in the field.

Based on the DT 770 professional studio headphone, the design has been adapted to allow superb isolation from ambient noise but with great comfort for long-term use. Frequency response for the headphone section remains 5 Hz – 35 kHz.

Designed for flexibility the headsets each feature a new pivoting gooseneck microphone boom, which can be positioned on either the left or right ear-shell, fitted with high quality microphone capsules. When not in use, the boom arm can be moved to the upright position, out of the way. The DT 790 features a dynamic hypercardioid capsule for use by cameramen and sound engineers, whilst the DT 797 is fitted with a cardioid condenser capsule which is ideal for live commentators and reporters.

As with all beyerdynamic headsets, these new models feature the same user-friendly modular design with extreme robustness, to ensure a long working life. The single-sided cable is available with a choice of different connectors for different applications.
